

Adding Your Panel to AtlasCloud

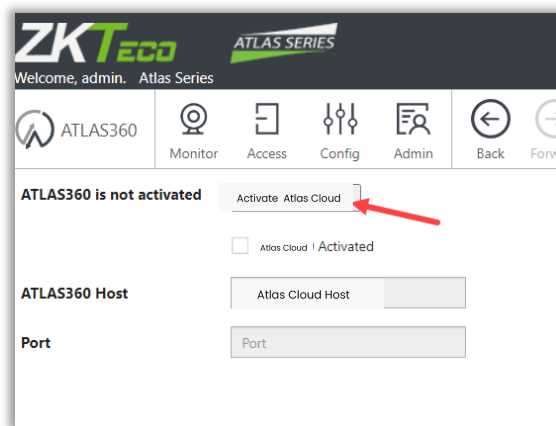

How do I add my Primary Panel to Atlas Cloud?

First you will need to update your controllers with the Atlas360 firmware package available on our website at [Downloads | Atlas cloud \(atlas-360.com\)](https://atlas-360.com/Downloads)

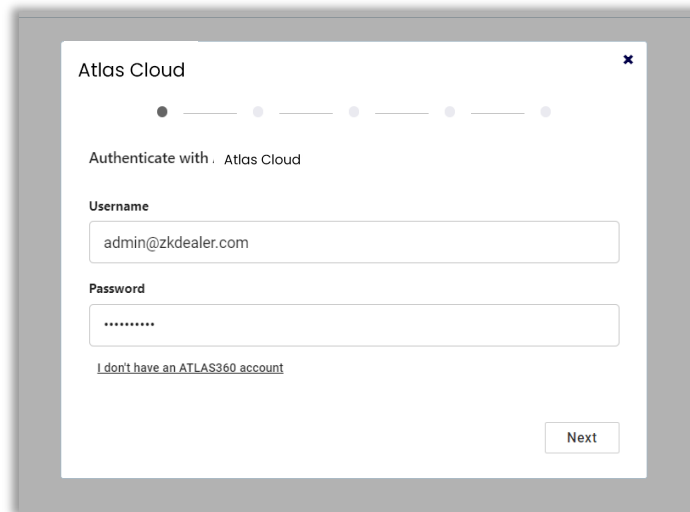

Once the controllers are updated you will see the “Atlas Cloud is not activated” panel. Click on that link and it will take you to the activation screen.

In this screen, click to “Activate ATLASCLOUD

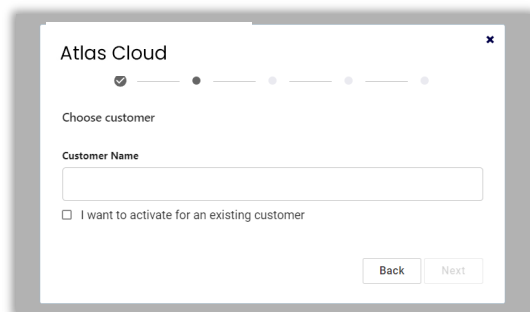

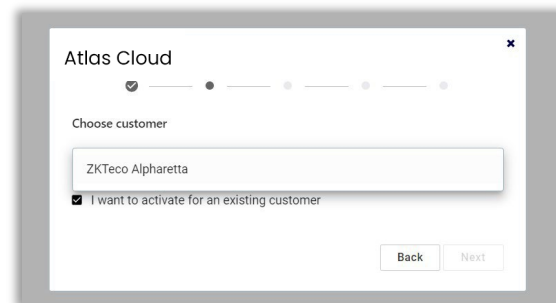

It will then ask you to put in your credentials. These are the same credentials that you are using for your Atlas Cloud portal login. This is how the panel knows where to link to.

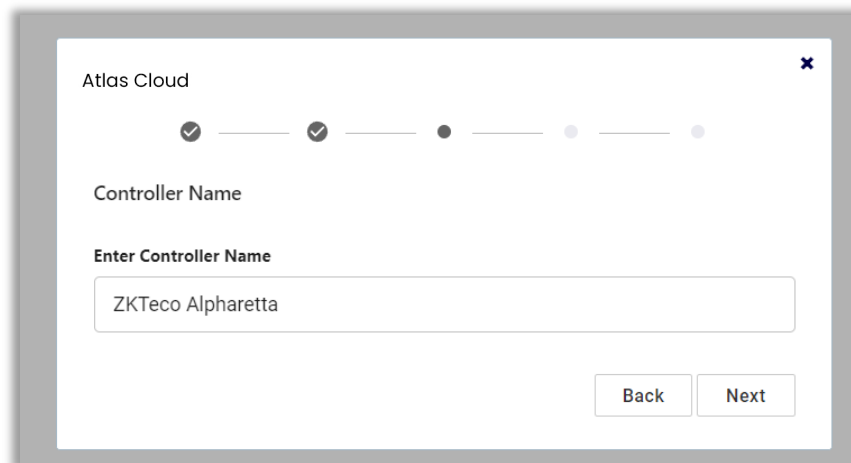

Click “Next” and it will have you select the Customer you want to activate this panel for.

- If you do not have an existing customer, you can input the name and it will create a new one in your portal.
- If you already have that customer, you can add this panel to their account.

It will then ask you to name that controller, I suggest naming it something identifiable that will know what site you are viewing in the portal.

Atlas Cloud

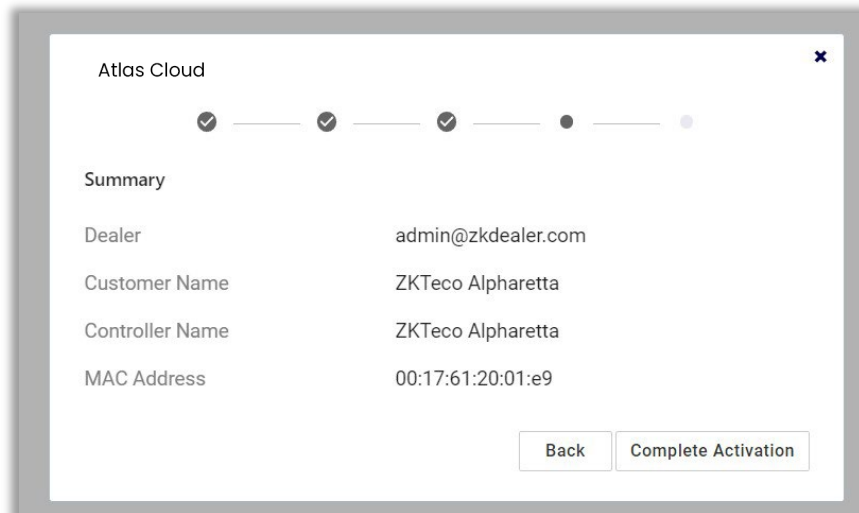

Controller Name

Enter Controller Name

ZKTeco Alpharetta

Back Next

Once done, it will show you a confirmation screen to make sure that information is correct. If so, you can then click “Complete Activation.”

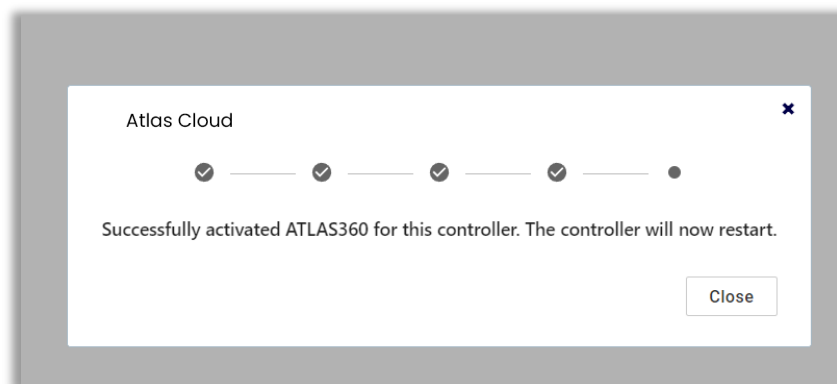

Atlas Cloud

Summary

Dealer	admin@zkdealer.com
Customer Name	ZKTeco Alpharetta
Controller Name	ZKTeco Alpharetta
MAC Address	00:17:61:20:01:e9

Back Complete Activation

After activating, it will show successful and reboot the controller.

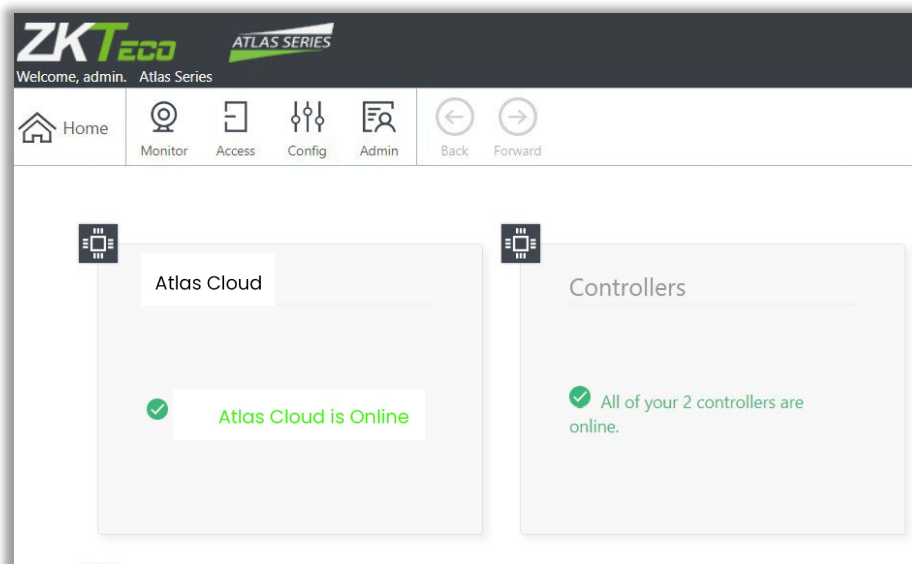

Atlas Cloud

Successfully activated ATLAS360 for this controller. The controller will now restart.

Close

That controllers main page will show that Atlas Cloud in online.

And you will see now see it in your Atlas Cloud Portal!
