

Atlas Access Control Ecosystem with Smarter Access Simpler Management

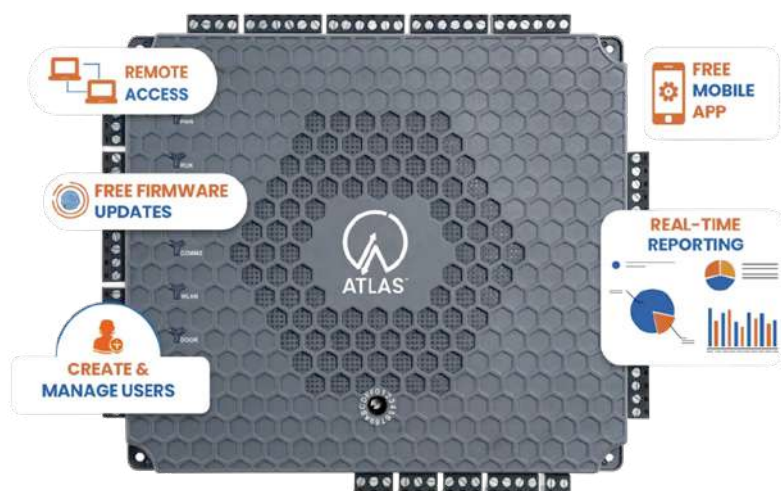

Atlas replaces the complexity of traditional access control with a system your team can actually manage — no servers, no IT department, no lost sleep. Installed by a licensed security professional and managed from your phone, Atlas puts you in control of every door from day one.

Built for Where You **Live, Worship, Work, or Learn**

Atlas is installed every day in properties like yours by licensed security professionals.

	Multi-Family Residential	Secure entry for residents and simple, trackable access for guests and staff.
	Houses of Worship	Welcoming access for members and events, with control over who enters after hours.
	Schools & Campuses	Controlled entry points that help keep students, staff, and visitors accounted for.
	Small Offices	Affordable, professional grade access control sized right for a single-site business.

Everyday Simplicity

Atlas is designed to be easy to live with, not just easy to install.

No Software to Maintain

The Atlas access control application runs on the panel, itself. Therefore no need for a computer nor mandatory cloud subscription fees.

Unlock However You Prefer

Key fob, RFID card, Keypad PIN, QR code, Bluetooth, NFC or fingerprint — choose the credential that fits your needs.

Manage Atlas from Your Phone for FREE

The free Atlas mobile app lets an administrator add users, review activity, and lock down doors from anywhere.

See Every Entry, Instantly

Atlas logs every access event — who entered, when, and which door. Always.

Keeps Working, Even Offline

Doors are controlled locally by the panel, so access continues uninterrupted even if the internet goes down.

Designed & Engineered in the USA

USA-inspected and NDAA compliant hardware, built to a high standard of quality and security.

Backed by ZKTeco USA

Atlas is a product of ZKTeco USA, a trusted global manufacturer of security solutions.

AtlasCloud: Remote Management with a Lifetime Warranty

Add optional AtlasCloud and get remote convenience plus extended warranty coverage on top of the Atlas panel your property already relies on.

- ✓ Lifetime Warranty — Coverage on eligible Atlas hardware for as long as your subscription is active.*
- ✓ Remote management — Make changes from anywhere — no on-site visit required for routine updates.
- ✓ Encrypted cloud backup — Your configuration and user data, safely stored off-site.
- ✓ Automatic firmware updates — Delivered in the background without interrupting daily operations.
- ✓ Local-first reliability — Doors keep working even if your internet connection is disturbed.

*Lifetime Warranty requires an active AtlasCloud subscription. T&C apply.

One Platform for Access and Visitors

Access control does a great job of recognizing the residents, members, students, or employees who belong on your property every day — but visitors are often left to a buzzer, a phone call, or a separate intercom system. Pairing Atlas with MySmartGuard+ closes that gap.

- ✓ Front-desk staff or residents can schedule visitor appointments from a mobile app or computer, in advance.
- ✓ Approved guests get frictionless, unattended entry — without a separate door intercom to buy or maintain.
- ✓ Cloud-based, multi-layered security keeps visitor access and resident/staff access on one connected platform.
- ✓ A great fit for apartment communities greeting guests, schools checking in visitors, and offices meeting clients.

Ask Your Integrator About an Atlas Kit

A kit pairs the panel and enclosure with pre-tested readers and credentials, so your installer goes straight from delivery to a working system.

Every kit qualifies for a Lifetime Warranty when registered with AtlasCloud.

Basic

Key fobs and prox card readers — a straightforward, budget-friendly starting point.

Core

HID-compatible prox cards for properties standardizing on a common credential.

Elite

Mobile-first BLE credentials, so residents and staff can use their phone as their key(s).
